About hearing loss and hearing aids!

Lisa Goldstein,
M.A., CCC-A,
Audiologist

Q I've tried hearing aids, but I hate having something stuck in my ear. What do you recommend?

A The hearing aid industry has witnessed significant advances in styles and technology, especially with "open-fit" behind-the-ear (BTE) devices. Years ago, the BTE was the most popular style until the virtually invisible completely-in-the-ear (CIC) came along. Indeed, the CIC hearing aid has developed into much more powerful and sophisticated miniature device with advanced feedback reduction. However today, BTE's have regained popularity as the miniature open-fit, open-ear devices, especially with my patients who want an nearly invisible aid. Call to schedule a personal listening demonstration and try the latest "open-fit" technology.
